

AnoPRO

The anodised coating for extremely high demands

Aluminium with the durability of stainless steel

The new AnoPRO-anodised coating generates an aluminium surface with highest demands on strength and quality. The new high-durable surface can replace from now on nameplates or frontpanels made of stainless steel.

Combined with our brilliant alugraphics technology you can reach new goals in product design.

AnoPRO means Aluminium-Polymer-Composite-layers with outstanding technical features. It is free of heavy metal, fluoropolymere and PVC. The characteristics of AnoPRO has been tested and approved in many analyses.

Product benefits

(compared to conventional oxid layers)

- Higher protection to corrosion
- Lower abrasion
- Optimised microstructure for highest resistance
- Absolutely high surface hardness (300% more durable than conventional anodised layers)
- High UV-resistance
- Harmless in contact with food (food & drug administration)
